EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Tejpal S. Hansra (Reg. No. 38,172) on April 28, 2005.

The application has been amended as follows:

In claim 1, please replace the recitation "...*measuring amplitudes of a plurality of AGC fields...*" with -- *measuring amplitudes of a plurality of automatic gain control (AGC) fields*--.

In claim 36, please replace the recitation "...*measuring amplitudes of a plurality of AGC fields...*" with -- *measuring amplitudes of a plurality of automatic gain control (AGC) fields*--.

Continued Examination Under 37 CFR 1.114

2. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on March 28, 2005 has been entered.

Allowable Subject Matter

3. Claims 1, 4-32, 36, 39-43, and 46-52 (to be renumbered 1-43) are allowed.

4. The following is an examiner's statement of reasons for allowance:

Claims 1, 4-32, 36, 39-43, and 46-52 are allowed as the prior art does not teach or suggest the applicant's invention. The amended claim language and the applicant's remarks in response to the Office Action mailed January 25, 2005 distinguish the Applicant's invention over the references that accompanied the Office Action.

Regarding claims 1 and 36, claims teach a method for use in a disk drive having a disk surface divided into a plurality of zones and storing a calibrated value based on measured amplitudes of a plurality of AGC fields in a first of the plurality of zones and storing the calibrated value onto the disk surface for use in determining whether a high fly write condition exists in the first of the plurality of zones. The distinguishing elements of the claim are writing a block of data onto the disk surface in a data sector associated with the AGC field in the first of the plurality of zones before the disk surface completes one revolution after measuring the measured amplitude regardless of whether the measured amplitude is within the predetermined tolerance and performing a write verification on the block of data read from the disk surface if the measured amplitude is outside of the predetermined tolerance.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Prior Art

Baba et al U.S. Patent No. 6,671,110 is cited as of interest for disclosure of a high fly write condition detection method through reading of automatic gain fields.

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Daniell L. Negrón whose telephone number is 571-272-7559. The examiner can normally be reached on Monday-Friday (8:30-6:00) alternate Fridays off.
